Right distal fibula fracture - initial assessment

Jordan Avery | DOB: 1991-04-16

Source: Harbor Orthopedics

Source date: 2026-08-22

REASON FOR ENCOUNTER

Right ankle and lower-leg discomfort after a missed step on August 22, 2026. The patient reported swelling and reduced walking comfort.

DOCUMENTED ASSESSMENT

The source note records a right distal fibula fracture after review of initial radiographs. It also records the patient's prior right tibial nail from a 2019 tibial fracture repair.

CARE ALREADY DOCUMENTED

The encounter note states that a walking boot was supplied and follow-up with orthopedics was arranged. This document does not add activity, weight-bearing, or treatment instructions.

QUESTIONS CARRIED FORWARD

The patient wants to discuss walking comfort, interval imaging, and whether the prior tibial hardware affects how the new injury is assessed.

SOURCE BOUNDARY

This is the initial assessment of the 2026 fibula injury. It is not the 2019 tibial operation and does not document a new implant.
