Resting ECG note for palpitation review

Jordan Avery (Synthetic) | DOB: 1991-04-16
Source: Sample Grove Primary Care (Fictional)
Source date: 2026-09-07

REASON FOR TEST

Patient-reported intermittent palpitations, described as brief racing-heart sensations, sometimes with nausea.

REPORTED EXAMINATION

Resting ECG obtained September 7, 2026. The fictional clinician's note states sinus rhythm at 82 beats per minute. The patient did not report a typical racing-heart episode while the ECG was obtained.

CONTEXT AND LIMITS

This file is a written encounter note, not an ECG tracing. The note does not establish the cause of intermittent symptoms or exclude events occurring outside the recorded examination.

PATIENT QUESTION

What information about the timing and duration of episodes would make the next discussion more useful?

Invented for Reva software demonstration. Not a real patient record or medical advice.
